National Youth Science Forum provides about ten talented Year 11 students from the District with a two week science odyssey in Canberra or Perth in January prior to Year 12.

Selections of the successful applicants are made following interview of the students by the District Committee.

Some 150 like-minded students are selected from Rotary Districts all over Australia and overseas to come together for this science program. Selected students have an enthusiasm for a career in science, engineering or technology.

National Youth Science Forum is a hands-on experience in which science comes to life and students learn leadership and communication skills and start networking for their future careers.
